

Forest Engineering

Forest Engineering is a mix of engineering, forestry and management. Focussing on worker safety and environmental protection, you'll design and build new roads, develop and modify forestry equipment, plan harvest operations and optimise transport logistics.

With Forest Engineering being the only programme of its kind in Australasia, you'll graduate with the ability to combine your skills to solve engineering problems in the natural world.

Year 13 school subjects required:

- ✓ Physics
- ✓ Calculus
- ✓ Chemistry
