

Software Engineering

Year 13 school subjects required:

- Physics
- Calculus

Think about transportation, entertainment, telecommunications, government, business, health, and avionics – they all need software and software based systems to function.

With a degree in Software Engineering, you will be equipped to work with teams of engineers and programmers to create complex software systems (think millions of lines of code).

This programme is a unique blend of foundational courses in Computer Science and Engineering, and giving you opportunities for practical work through a series of projects.
