

Exams Using Respondus LockDown Browser and Respondus Monitor

What is Respondus Lockdown Browser and how does it work?

Respondus LockDown Browser and Respondus Monitor function as a restricted web browser, which interacts with AKO|LEARN to deliver assessments and examinations to prevent breaches of academic integrity.

Respondus LockDown Browser: creates a locked down machine environment.

Respondus Monitor: adds an additional layer of invigilation to the locked down machine by recording the assessment/exam session using the web camera and microphone, which is then made available at the end of the examination to the course instructor to review.

Please note: the recordings made by Respondus Monitor are generally only visible to staff of the University of Canterbury. You can read more about the Respondus Privacy Policy [here](#) and [here](#).

Getting ready for the use of Respondus LockDown Browser and Monitor:

You should watch the short student overview video here:

<https://web.respondus.com/lockdownbrowser-student-video/>

and review the device system requirements and check them against your own device:

- **Windows:** 11 and 10. [Details](#)
- **Mac:** OS X 10.15 to 14+.
- **iOS:** 12+ (iPad only). Must have a compatible LMS integration. [Details](#)
- **ChromeOS:** ver 126
- Web camera (internal or external) & microphone
- A broadband internet connection

Download LockDown Browser onto your device by completing the Practice Quiz – see *Step 3 below*.

VPN: If you are using Respondus LockDown Browser and/or Respondus Monitor from China, then installing and using VPN software is strongly advised.

It is not required for Students based in New Zealand

In summary:

Respondus LockDown Browser can be used for certain courses where the class is sitting a computer-based exam. Or where an exam is an invigilated exam for on-campus students.

Respondus Monitor may be used and adds an additional layer of invigilation to the locked down machine by recording the assessment/exam session and using the web camera and microphone, which is then made available at the end of the examination to the course instructor to review.

Below are some quick tips to prepare you for the use of Respondus LockDown Browser and Monitor

1. Make sure you are aware (by checking with your course co-ordinator) of the format of your assessment/examination – e.g. an AKO|LEARN quiz via Respondus LockDown Browser or Zoom invigilation.
2. Make sure that you know the date and time of your assessment/examination that will be using Respondus LockDown Browser and Monitor.
3. You should always attempt the Practice Quiz which will be loaded and clearly marked in your AKO|LEARN site, so you can get a feel for what the Respondus interface is like, and to test that your device is compatible with the Respondus software. You will be able to do this Practice Quiz as many times as you like.

You can also access a practice quiz on the following LEARN site

<https://learn.canterbury.ac.nz/course/view.php?id=12366>

Attempting to complete this Practice Quiz will also prompt you to download the LockDown Browser onto your device – It must always be launched via AKO|LEARN itself. NOT from any icons on the computer

LEARN will provide a unique download link for LockDown Browser. (Don't Google for a download link -- it will be for the wrong site!)

Please note: If you are allowed to have additional materials in your exam (e.g., a calculator or notes) you must show these to the camera during the start-up phase of your exam (in the "Environment Check" step). You can also check the conditions of your assessment/exam by contacting your course coordinator.

4. If your assessment/exam is being delivered as an AKO|LEARN quiz, you will answer questions in the normal manner (selecting correct options; typing in answers etc) until it is submitted for marking.

ADDITIONAL SUPPORT | TROUBLESHOOTING:

Restart the system before a test or if there are any problems and do the practice quiz

During the Exam period, the UC Service Desk is your first point of contact for any issues. There may be a long wait time for your call to get answered, please stay in the queue.

If your connection is lost during the assessment/exam itself, you should reboot your device and re-enter your assessment/exam. This will resolve most issues.

If you have technical issues with the Respondus Monitor software itself during the use of the Practice Quiz or the onboarding process for your assessment/exam itself, there is also 24/7 chat help available from the Respondus Team via the Respondus LockDown Browser interface (this is accessed by clicking the (i) icon in the panel at the top left of the Respondus screen while it is open).
