

## Bachelor of Science

A Bachelor of Science (BSc) is about understanding and improving the natural world through observation, experimentation, modelling and calculation. With a BSc, you'll have the skills and knowledge to make a real contribution to our world.

### Why do a BSc?

As a BSc student you'll investigate the big issues confronting our planet, including climate change, human health and diseases, the global water crisis, food security, environmental protection and much more.

A BSc will expose you to new ideas and technologies, develop your research skills and help you understand and influence the world around you.

### Where can it take me?

A BSc sets you up to pursue a wide range of careers all over the world – from a marine biologist to a market analyst, a psychologist to a policy adviser, a seismologist to an aerospace engineer.

It can open doors to many other careers too, including business, politics, medicine, finance and engineering. With a BSc – anything is possible.

### Why UC?

Our 3-year BSc degree is hugely flexible, and you can mix and match subjects across a range of disciplines. This allows you to explore a wide range of subjects, try things out, and see what you like before you specialise and progress in your career.

You can choose from 18 major subjects and 32 disciplines in total, giving you the opportunity to design your own future.

**Choose science. Change the world.**
