

INDEX OF TERMS

absorbance	10-5	basic solution	14-5
acid	12-3	basicity constant	14-5
acid anhydride	6-4 13-3	Beer's law	10-5
acid dissociation constant	14-5	benzene	6-5
acid-base (reaction type)	12-3	benzyl group	6-5
acid-base equilibria	14-4	bimolecular rate constant	16-2
acidic solution	14-5	bimolecular reaction	16-1
acidity constant	14-5	binary compound	1-2
activation energy	16-2 16-3	blocks of periodic table	3-3
acyclic compound	6-2	bond	1-4
acyl halide	6-4	bond enthalpy (strength)	11-3
addition (reaction type)	12-1	bond length	4-3
adduct	16-4	bond strength	4-3 11-3
aerosol	1-4	Boyle's law	9-1
alcohol	6-3	Brønsted acid or base	12-3 14-6
aldehyde	6-3	buffer solution	14-6
aliquot	10-3	burette	10-3
alkali	12-3	calorimeter	11-2
alkali metal (element)	3-3	calorimetry	11-2
alkaline earth metal (element)	3-3	carbocation	16-4
alkaline solution	14-5	carboxylic acid	6-4
alkane	6-1	carboxylic acid derivative	6-4
alkene	6-2	carboxylic acid salt	6-4
alkyl group	6-2	catalyst	16-3
alkyl halide	6-3	cathode	15-3
alkyne	6-2	cation	1-2
allotrope	1-2	cell potential	15-1
amide	6-3	cell reaction	15-2
amine	6-3	chain length (chain reactions)	16-4
amount of substance	8-1	chain reaction	16-3
analysis	10-1	Charles's law	9-1
analyte	10-2	chemical bond	1-4 2-1 4-1
anhydride	13-2	chemical equation	2-1
anion	1-2	chemical equilibrium	14-1
anode	15-3	chemical formula	1-4
aqueous solution	1-3	chemical kinetics	16-1
Arrhenius equation	16-3	chemical reaction	2-1
Arrhenius plot	16-3	chemical yield	14-3
Aromatic compound	6-5	chemistry	1-1
atom	1-1	classes of equilibrium	14-3
atomic mass constant	8-2	classification of reactions	12-1
atomic number		coherent SI units	7-2
1-1		colloid	1-4
atomic orbitals	3-1	combustion	2-1 11-2
atomic weight	8-3	complex ion	14-6
Avogadro constant	8-2	complex ion formation	
Avogadro's hypothesis		14-6	
9-1		composition	10-1
azimuthal quantum number	3-2	compound	1-2
balanced chemical equation	2-1	concentration	10-1
balanced redox equations	12-4	concentration equilibrium constant	14-2
base	12-3	condensation	1-3

			In-2
condensation (reaction type)		12-2	equilibrium constant 14-1
condensed structures		5-2	equivalence point 10-3
conjugate acid	12-3	14-5	ester 6-4
conjugate base		12-3	evaporation 1-3 9-2
constitutional isomer		6-2	excited state 3-3
coordination		13-1	exothermic reaction 11-1
covalent bond		4-1	extinction coefficient 10-5
crystalline solid		1-3	Faraday constant 15-4
crystallisation		1-4	Faraday's laws of electrochemistry 15-3
cyclic compound		6-2	foam 1-3
dalton		8-2	formal charge 5-3
Dalton's law of partial pressures		9-1	formation constant 14-7
decomposition		12-1	formula 1-3
decomposition equilibrium		14-4	free-radical 1-5 16-4
density		7-1	free-radical addition 16-7
deposition		1-3	freezing 1-3
derivative of carboxylic acid		6-3	functional group 6-2 6-3
dissolution		12-1	fusion 1-3
distribution coefficient			galvanic cell 15-1
14-4			gas 1-3
double bond		4-1	gas evolution 12-1
dynamic equilibrium		14-1	gas laws 9-1
electrochemical cell		15-1	gel 1-4
electrochemistry		15-1	gravimetric analysis 10-2
electrode		15-1	ground state 3-2
electrode potential		15-2	groups of periodic table 3-3
electrode potential of a couple			half-cell 15-1
15-2			half-life 16-3
electrode reactions		15-1	half-reaction 12-4 15-1
electrolysis		15-3	halide 3-3
electrolyte		15-1	halide (alkyl) 6-2
electrolytic cell		15-3	halide ion 3-3
electromotive force		15-1	haloalkane 6-3
electron		1-1	halogen 3-3
electron configuration		3-2	heat 11-1
electron pair		3-1	heat capacity 11-2
electron shells		3-2	heat capacity at constant pressure 11-2
electronegativity	4-3	12-4	heat of combustion 11-3
electronic energy levels		3-1	heat of formation 11-3
electronic structure		3-1	Heisenberg uncertainty principle 3-1
electrophile		16-4	Henry's law 14-3
electrophilic addition		16-5	Hess's law of heat summation 11-3
electrophilic aromatic substitution		16-6	heterogeneous catalysis 16-4
element		1-1	heterogeneous mixture
elemental analysis		10-1	1-3
elemental substance		1-2	heterolytic bond breaking or making 16-5
elementary reaction		16-1	homogeneous catalysis 16-4
elimination (reaction type)		12-2	homogeneous mixture 1-3
elimination second order		16-6	homolytic bond breaking 16-5
empirical formula		1-4	homolytic bond making 16-5
emulsion		1-4	hydrocarbons 6-1
endothermic reaction		11-1	hydrogen abstraction 16-7
energy levels		3-1	hydrogen bond
enthalpy change		11-1	4-3

hydrolysis	12-6	15-2	molecular shape	5-3
hydronium ion		12-3	molecularity	16-2
hydroxide		13-1	molecule	1-2
hydroxide ion		12-3	monomer	1-5
ideal gas		9-1	multifunctional compound	6-4
ideal gas equation		9-1	neutral solution	14-5
initiation step		16-3	neutralisation	12-3
inorganic chemistry		1-5	neutron	1-1
inorganic compound		13-1	nomenclature	1-5
integrated rate equation		16-3	nomenclature of inorganic cpds.	13-1
intermolecular bonds		4-3	nomenclature of organic cpds	6-1 6-4
intramolecular bonds		4-3	non-metal	1-1
ion		1-2	nuclear equation	2-3
ionic bond		4-3	nucleon	1-1
ionic compound		1-3	nucleophile	16-4
ionic equation		2-2	nucleophilic substitution	16-5
ionisation energy		3-3	nucleus	1-1
isomer		6-2	occupancy of shells	3-2
isotope		1-1	optical density	10-5
ketone		6-3	order of reaction	16-2
kinetic theory of gases			organic chemistry	1-5
9-2			organic compounds	6-1
kinetics		16-1	oxidant (oxidising agent)	12-4
K for overall reactions		14-3	oxidation	12-4
K 's on reaction written in reverse		14-3	oxidation number (state)	12-4
K_w		14-5	oxide	13-1
latent heat		11-2	oxo	6-4
Lewis acid or base	14-6	16-4	oxonium ion	12-3
Lewis structures	4-2	5-1	partial pressure	9-1
life-time		16-3	parts per million	10-1 10-2
ligand		13-1	paste	1-4
liquid		1-3	per (meaning of)	13-2
magnetic quantum number		3-2	percentage chemical yield	14-3
mass number		1-1	percentage composition	10-1 10-2
matter		1-1	periodic table	1-1 3-3
mean life-time		16-3	periods	3-3
measurement		7-1	pH	14-5
melting		1-3	phase	1-3
metal		1-1	phase change	1-3
metallic bond		4-3	phenyl group	6-5
metalloid		1-1	photon	3-4
mineral		1-4	pipette	10-3
mixture		1-3	pK	14-3
molality		10-1	pK_a	14-5
molar absorptivity		10-5	polar bond	4-3
molar heat capacity		11-2	polar molecule	4-3
molar mass		8-1	polymer	1-5 12-2
molar (mol L^{-1})		10-1	polymerisation	
molar (per mole)		8-1	12-2	
molarity	10-1	10-2	polyprotic acid or base	
mole		8-1	14-6	
mole fraction	10-1	10-2	position of equilibrium	14-2
molecular formula		1-4	positional isomers	6-2
molecular weight		8-3	potential	15-2

precipitation		12-1	Schrödinger wave equation	3-1
prefixes for decimal multiples			secondary amide	6-4
7-2			secondary amine	6-3
prefixes, Latin and Greek		6-1	secondary carbon atom	6-2
pressure equilibrium constant		14-2	semimetal	1-1
primary amide		6-4	shape	5-3
primary amine		6-3	SI units	7-2
primary carbon atom		6-2	single bond	4-1
primary standard		10-4	slurry	1-4
principal quantum number		3-2	sol	1-4
product		2-1	solid	1-3
propagation steps		16-3	solubility	14-4
proton	1-1	12-3	solubility constant (product)	14-4
proton acceptor		12-3	solute	1-3
proton donor		12-3	solution	1-3
proton transfer reaction		12-3	solvent	1-3
quantity		7-1	specific heat capacity	11-2
quantity calculus		7-3	spectator ions	12-7
quantum numbers		3-1	spectrophotometric cell	10-5
quantum theory		3-1	spectroscopic analysis	10-6
quaternary carbon atom		6-2	spin of an electron	3-2
radioactivity		1-2	spin quantum number	3-2
rate constant (coefficient)		16-2	stability constant	14-7
rate equation (law)		16-2	standard concentrations	14-2
rate of reaction		16-1	standard hydrogen electrode	15-2
rate-determining step		16-2	standard pressure	14-2
reactant		2-1	standard solution	10-3
reaction		2-1	standardising	10-4
reaction intermediate		16-2	stoichiometric coefficient	2-1
reaction mechanism		16-2	stoichiometric point	10-3
reaction order		16-2	stoichiometry	2-1 8-2
reaction quotient		14-1	strong acid or base	14-5
reaction rate		16-1	strong oxidant or reductant	15-2
reagent		12-1	structural formula	5-1
redox couple		15-1	structural isomer	6-2
redox potential			structure of organic cpds.	6-1
15-2			sublimation	1-3
redox reaction		12-3	substance	1-1
reductant (reducing agent)		12-4	substitution (reaction type)	12-2
reduction		12-4	substrate	12-1
reduction potential		15-2	surroundings	11-1
relative atomic mass	1-2	8-3	system	11-1
relative molecular mass		8-3	table of electrode potentials	15-2
resonance hybrid	5-2	6-4	temperature control of equilibrium	14-3
resonance structures	5-3	6-4	termination step	16-3
reversible galvanic cell		15-3	termolecular reaction	16-2
reversible reaction		14-1	tertiary amide	6-4
rows of periodic table		3-2	tertiary amine	6-3
rules for balancing redox equations		12-5	tertiary carbon atom	6-2
rules for drawing Lewis structures		5-1	thermochemistry	11-1
rules for oxidation numbers (states)		12-4	titrant	10-3
salt	12-3	13-1	titration	10-3
saturated compound		6-1	titre	10-3
saturated solution		14-3	transition metal (element)	3-3

triple bond	4-1
unified atomic mass unit	8-2
unimolecular reaction	16-1
unit	7-1 7-2
units of equilibrium constants	14-2
universal gas constant	9-1
unsaturated compound	6-2
valence	1-5
valence electrons	3-3
valence shell el-pair repulsion theory	5-3
Van der Waals bonds	4-3
vapour	9-2
vinyl group	6-5
volumetric analysis	10-3
volumetric flask	10-4
VSEPR theory	5-4
weak acid or base	14-5
